SKILLS

JAVA	Spring Boot	Spring Framework	Spring Security
Spring MVC	Microservices Architecture	API Gateway	
Load Balancing	Hibernate	Spring	MySQL JDBC
Servlets	C	HTML	CSS Thymeleaf JavaScript
OOPS	JSP	REST APIs	Git Maven

PROJECTS

CRM Application for Sales Optimization.

- Developed a CRM application that improved sales workflow efficiency by 40% and increased customer engagement through personalized interaction features.
- Implemented backend functionalities using Java and Spring Boot, reducing processing time for key operations by 20% and enhancing system scalability for future expansions.
- Designed responsive user interfaces with Thymeleaf, HTML, CSS, and JavaScript, resulting in a 20% increase in user satisfaction scores through seamless navigation and intuitive design.
- Optimized database performance by utilizing MySQL, increasing operational efficiency by 20%.

Hotel Rating Service Using Microservices.

- Implemented a Microservices Architecture with three services (User Service, Rating Service, and Hotel Service), each with a dedicated database to ensure data independence and scalability.
- Inter-service communication is facilitated through Feign Client, while service discovery is managed by the Eureka Server.
- Load balancing ensures even distribution of traffic across service instances, while the API Gateway serves as a unified access point for all services.

Kidney Stone Detection Using Image Processing & Deep Learning.

- Analyze medical imaging data using image processing methods, particularly focusing on kidney images.
- Compile a dataset of kidney images (both with and without stones) to train the deep learning model.
- Enable real-time analysis of kidney images for prompt detection and treatment of abnormalities.
- Perform thorough evaluations of the model with 90% accuracy, sensitivity, and specificity to compare its performance with existing diagnostic methods.

Underground Cable Fault Detector using Microcontroller.

- Utilise sensors to find faults in the underground cable network, such as location and fault detection sensors.
- When selecting a microcontroller for processing and analysing sensor data, take memory, processing speed, and power consumption into account.
- Designed a microcontroller-based system to analyze sensor data, detect underground cable faults, and built a user-friendly interface to cut maintenance response time by 40%.

EXPERIENCE

Full Stack Java Developer

Brightlink info technologies

08/2024

- Created and secured RESTful APIs using Spring Boot, facilitating seamless communication between front-end and back-end, improving system efficiency by 30%.
- Introduced a responsive, interactive UI layer using HTML5, CSS3, and JavaScript.
- Optimized MySQL database queries, resulting in a 30% improvement in application performance.
- Conducted Unit Testing and front-end testing to ensure high-quality, 100% bug-free applications.

Junior Web Developer

Tech_OctaNet Services Pvt Ltd

01/2024 - 02/2024

- Led the design and development of the landing page for the Jewelry Exhibition Conference, increasing visitor engagement by 25% and enhancing overall user experience.
- Created a visually appealing and informative webpage to engage potential attendees, provide key event details, and achieve a 25% increase in sign-ups.

EDUCATION

Bachelor Of Engineering in Electronics And Telecommunications

University Of Pune

2018 - 07/2023

GPA

7.58 / 10.0

CERTIFICATIONS

Java Full Stack Developer

SQL and Relational Databases Provided by IBM

Machine Learning with OpenCV

6th International Conference on Ideas, Innovations and Impact in Science and Technology (ICIIST'23)
